

Ideation Phase

Empathize & Discover

Date	30 September 2026
Team ID	SWTID-2026-9263
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to help teams better understand their users.

Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Example: Food Ordering & Delivery Application

Empathy Map – Standard Laptop Procurement User

SAYS • “I need a standard laptop for my work.” • “I want my laptop to be configured before I start using it.” • “I need the request and approval process to be quick.”	THINKS • Will my request be approved without delays? • Will the laptop be ready when it arrives? • I should not have to repeatedly follow up with IT.
DOES • Places a Standard Laptop request through Service Catalog. • Waits for approval and procurement processing. • Checks the request/order status and requested item record.	FEELS • Frustrated by delays and manual follow-ups. • Concerned when configuration is overlooked. • Relieved when the laptop is configured promptly.
PAINS • Manual intervention can slow the procurement process. • Configuration tasks may be missed or delayed. • Longer user wait times. • Inefficient allocation of IT resources.	GAINS • Faster laptop configuration after arrival. • Less manual intervention and fewer errors. • Clearer task assignment to the Hardware team. • A smoother and more efficient procurement experience.

Project context: The empathy map focuses on the user requesting a standard laptop, whose experience is affected by approval, procurement, configuration, and task-assignment delays.
