

Project Design Phase
Proposed Solution

Date	30th September 2026
Team ID	SWTID-2026-9263
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	2 Marks

Proposed Solution:

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	In traditional IT Service Management environments, purchasing and provisioning standard employee hardware (such as laptops) relies heavily on manual ticket creation, human handoffs, and manual queue polling. This results in missing task assignments, extended fulfillment lead times, operational bottlenecks, and lack of real-time visibility for both requesters and IT technicians.
2.	Idea / Solution description	Implementation of an automated workflow engine using ServiceNow Flow Designer for the <i>Standard Laptop</i> Catalog Item. Upon manager approval of a Service Catalog Request, the system automatically triggers a dedicated flow that creates a Catalog Task (SCTASK), pre-populates configuration parameters (e.g., " <i>Laptop needs to be Configured</i> "), and instantly routes the task to the designated Hardware Configuration Group without manual intervention.
3.	Novelty / Uniqueness	●Zero-Touch Dispatch: Completely eliminates manual queue assignment by linking Service Catalog approvals directly to task generation. ●No-Code Workflow Logic: Built natively using ServiceNow Flow Designer, ensuring high maintainability and easy customization without legacy script overhead. ●Event-Driven Execution: Instant state-triggered routing ensures end-to-end task tracking from order placement to hardware staging.
4.	Social Impact / Customer Satisfaction	●Reduced Employee Downtime: Accelerates new-hire onboarding and hardware replacement cycles by reducing procurement turnaround times. ●Enhanced Transparency: Requesters receive clear, real-time updates regarding order approval and configuration progress. ●Minimized Human Error: Prevents overlooked orders and lost configuration tasks, boosting trust in internal IT support services.
5.	Business Model (Revenue Model)	●Internal Cost Reduction (Operational Efficiency): Saves technician working hours by automating routine administration tasks, yielding direct operational cost savings. ●Enterprise ITSM SaaS Integration: Reusable module framework that can be monetized as an IT Operations Management (ITOM) / ITSM workflow package for enterprise client instances.
6.	Scalability of the Solution	●Multi-Hardware Support: Flow logic can be effortlessly cloned and extended to handle mobile devices, monitors, and specialized peripheral requests. ●Cross-Departmental Expansion: The same workflow architecture scales across HR Onboarding, Access Management, and Facilities asset provisioning. ●Enterprise Ready: Fully scalable to process hundreds of concurrent request streams across global enterprise divisions within ServiceNow.
